

CLEARBRIDGE ALL CAP GROWTH PORTFOLIOS

Investment overview

ClearBridge All Cap Growth Portfolios (ACG) seeks long-term capital appreciation through investment in large-, mid-, and small- capitalization stocks that have the potential for above average long-term earnings and/or cash flow growth.

Investment objective

Seeks:

Long-term capital appreciation

Investment philosophy

We believe that:

- Competitive returns may be achieved by investing in a diversified portfolio of large-, medium- and small-capitalization stocks that have the potential for above-average long-term growth and returns.¹
- An intensive, bottom-up investment process can help find inefficiently priced companies with strong fundamentals, incentive-driven management teams, dominant positions in niche markets, and/or goods and services customers are practically compelled to use.
- Consistency in our investment process, research, performance and client service is the key to excellence.

Portfolio positioning

- Core growth option, which can be complemented by other investments or asset classes for further diversification.²
- Designed for investors looking for a growth portfolio that invests across multiple market capitalizations with a buy-and-hold strategy. This strategy does not force buy or sell decisions based on market capitalization. The potential result may be reduced portfolio turnover over time.³

Key differentiators

- The strategy combines the expertise of four seasoned portfolio managers.
- High-conviction stock selection that offers potential for growth across market cycles.
- Portfolio managers evaluate each position daily and may decide to invest portfolios gradually or all at once based on market conditions, valuations and/or factors they consider to be relevant.

Management team

ClearBridge Investments is a well-established global investment manager focusing on proprietary research and fundamental investing. With over 50 years of experience building portfolios for clients seeking income solutions, high active share or low-volatility, long-tenured portfolio managers provide strong leadership in a centralized investment structure.

Investment management team

Evan Bauman,

Managing Director

- Portfolio Manager
- Industry since 1996

Peter Bourbeau,

Managing Director

- Portfolio Manager
- Industry since 1991

Richard Freeman,

Managing Director

- Portfolio Manager
- Industry since 1976

Margaret Vitrano,

Managing Director

- Portfolio Manager
- Industry since 1996

Risks: All investments involve risk, including loss of principal and there is no guarantee that investment objectives will be met.

In addition to investments in large-capitalization companies, investments may be made in speculative and/or small-cap and mid-cap companies which involve a higher degree of risk and volatility than investments in larger, more established companies.

In addition, because the investments may be concentrated in a limited number of industries and companies, the portfolios may involve heightened risk.

While most investments are in U.S. companies, investments may also be made in ADRs and other securities of non-U.S. companies in developed and emerging markets which involve risks in addition to those ordinarily associated with investing in domestic securities, including the potentially negative effects of currency fluctuation, political and economic developments, foreign taxation and differences in auditing and other financial standards. These risks are magnified in emerging markets.

Active share is a measure of the percentage of stock holdings in a manager's portfolio that differs from the benchmark index.

¹ ACG portfolios invest primarily in large-capitalization stocks, investing much smaller portions of the portfolios in small- and mid-capitalization company stocks.

² Diversification does not assure a profit or protect against market loss.

³ Market, security and/or other investment considerations may result in higher turnover from time to time. Also, all capitalization ranges will not necessarily be represented in an individual account.

Investment process

STEP 1

Idea generation

Identify companies with strong business models, capital structures and management teams, generally with market capitalizations of \$3 billion or greater.

STEP 2

Fundamental analysis

Determine valuation considering the size of a business's addressable market, free cash flow yield, P/E, EV/Sales¹, PEG Ratio². Identify key risks and potential downside.

STEP 3

Portfolio construction

Actively select investments across the growth spectrum, allocated into three growth buckets (Cyclical, Stable and Select) with distinct risk/return characteristics. Managers are willing to pay a premium for companies with sustainable growth characteristics and superior ROIC³.

STEP 4

Risk management/ Evaluation discipline

Understand security level and portfolio level risks. Actively review investment rationales, position sizes and diversification metrics.

Performance

Annualized rates of return - gross and net of fees (%) as of December 31, 2018 - PRELIMINARY

	Dec '18	Q4 '18	YTD	1-year	3-year	5-year	7-year	10-year	15-year	20-year

The strategy returns shown are preliminary composite returns, subject to future revision (downward or upward). Please visit www.leggmason.com for the latest performance figures. YTD numbers are not annualized. Investors cannot invest directly in an index, and unmanaged index returns do not reflect any fees, expenses or sales charges.

Fees: Gross performance shown does not reflect the deduction of investment management fees and certain transaction costs, which will reduce portfolio performance. Net performance includes the deduction of a 3.0% annual wrap fee, which is the maximum anticipated wrap fee for equity and balanced portfolios. Actual fees vary. For fee schedules, contact your financial professional, or if you enter into an agreement directly with Legg Mason Private Portfolio Group (LMPPG), refer to LMPPG's Form ADV disclosure document. Returns reflect the reinvestment of dividends and other earnings.

The investment process may change over time. The characteristics set forth above are intended as a general illustration of some of the criteria the strategy team considers in selecting securities for client portfolios. There is no guarantee that investment objectives will be achieved.

Past performance is not a guarantee of future results. Please see GIPS® Endnotes for important additional information regarding the portfolio performance shown and for effects of fees. Management and performance of individual accounts may vary for reasons that include the existence of different implementation practices and model requirements in different investment programs. Separately Managed Accounts (SMAs) are investment services provided by Legg Mason Private Portfolio Group, LLC (LMPPG), a federally registered investment advisor. Client portfolios are managed based on investment instructions or advice provided by one or more of the following Legg Mason-affiliated subadvisors: ClearBridge Investments, LLC and Western Asset Management Company. Management is implemented by LMPPG, the designated subadvisor or, in the case of certain programs, the program sponsor or its designee.

¹ **Enterprise-Value-To- Sales (EV/Sales):** A valuation measure that compares the enterprise value of a company to the company's sales. EV/sales gives investors an idea of how much it costs to buy the company's sales. Generally the lower the EV/sales the more attractive or undervalued the company is believed to be.

² **Price/Earnings To Growth – PEG Ratio:** A stock's price-to-earnings ratio divided by the growth rate of its earnings for a specified time period. The price/earnings to growth (PEG) ratio is used to determine a stock's value while taking the company's earnings growth into account, and is considered to provide a more complete picture than the P/E ratio. While a high P/E ratio may make a stock look like a good buy, factoring in the company's growth rate to get the stock's PEG ratio can tell a different story. The lower the PEG ratio, the more the stock may be undervalued given its earnings performance.

³ **Return On Invested Capital (ROIC):** A calculation used to assess a company's efficiency at allocating the capital under its control to profitable investments. The return on invested capital measure gives a sense of how well a company is using its money to generate returns.

¹ Source: FactSet. Portfolio characteristics are based on a model portfolio, not an actual client account. The model portfolio is a hypothetical portfolio whereby the portfolio characteristics are based on simulated trading and account activity of a client account invested in this strategy. The model portfolio assumes no withdrawals, contributions or client-imposed restrictions. Portfolio characteristics of individual client accounts may differ from those of the model portfolio as a result of account size, client-imposed restrictions, the timing of client investments, market conditions, contributions, withdrawals and other factors.

Compliance Statement:

ClearBridge Investments, LLC claims compliance with the Global Investment Performance Standards (GIPS®) and has prepared and presented this report in compliance with the GIPS standards. ClearBridge Investments, LLC has been independently verified for the periods January 1, 1997 - December 31, 2017. The verification reports are available upon request.

Verification assesses whether (1) the firm has complied with all the composite construction requirements of the GIPS standards on a firm-wide basis and (2) the firm's policies and procedures are designed to calculate and present performance in compliance with the GIPS standards. Verification does not ensure the accuracy of any specific composite presentation.

Firm Information:

ClearBridge Investments, LLC ("ClearBridge") is a wholly owned subsidiary of Legg Mason, Inc. ("Legg Mason"). The investment advisory business now known as ClearBridge was registered in September 2005 to facilitate Legg Mason's acquisition of substantially all the equity asset management businesses known as Citigroup Asset Management. These former businesses serve as the foundation of ClearBridge and its claim of GIPS compliance for institutional accounts through predecessor firms, effective as of January 1997. In June 2008, ClearBridge combined this business with its retail business to form a single GIPS firm. As of April 1, 2013 and January 1, 2016, ClearBridge's affiliates, Global Currents Investment Management, LLC, and ClearBridge, LLC, respectively, have become part of the ClearBridge GIPS firm.

Composite Information:

The ClearBridge All Cap Growth SMA composite consists of discretionary wrap accounts with an account minimum of US \$25,000. Accounts within the composite seek long-term capital appreciation by investing in a mix of large, mid and small capitalization stocks believed to have substantial growth potential. The strategy is implemented by Legg Mason Private Portfolio Group, LLC (LMPPG). LMPPG claims compliance with the Global Investment Performance Standards (GIPS®) and has been independently verified for the periods January 1, 2013 - December 31, 2017. The verification reports are available upon request. Verification assesses whether (1) the firm has complied with all the composite construction requirements of the GIPS standards on a firm-wide basis and (2) the firm's policies and procedures are designed to calculate and present performance in compliance with the GIPS standards. Verification does not ensure the accuracy of any specific composite presentation. The main risks of this strategy are General Investment Risk, Industry and Issuer Concentration Risk, Small Cap Risk, Mid Cap Risk, High Volatility Risk, and Non-U.S. Investment Risk. Prior to June 2008, the minimum was \$5,000.

Input and Calculation Data:

The fee schedule currently in effect is 3.00% on all assets. Net of fee composite returns are calculated by reducing each monthly composite pure gross rate of return by the highest "bundled" fee charged (3.00%) annually, prorated to a monthly ratio. The "bundled" fee includes transaction costs, investment management, custodial, and other administrative fees. Effective January 1, 2013, the number of portfolios reflects a change from prior periods due to an aggregation of accounts as reported by one sponsor. As of January 2014, the internal dispersion of annual returns is measured by the asset-weighted standard deviation of portfolio returns included in the composite for the entire year. For prior years, the equal-weighted standard deviation was used. The composite employed a 10% significant cash flow policy which was discontinued in January 2012. A list of composite descriptions is available upon request. Policies for valuing portfolios, calculating performance, and preparing compliant presentations are available upon request. In September 2018, the composite inception date was revised to more accurately reflect the composite. Past performance is not necessarily indicative of future results.

Benchmark Information:

The Russell 3000® Growth Index measures the performance of those Russell 3000 Index companies with higher price-to-book ratios and higher forecasted growth values. The S&P 500 Index is a broad-based measurement of changes in stock market conditions based on the average performance of 500 widely held common stocks. Investors cannot invest directly in an index and unmanaged index returns do not reflect any fees, expenses or sales charges. The index is not managed and not subject to management or brokerage commissions. Dividends are subject to reinvestment.

The investment strategies described herein are those of Legg Mason Private Portfolio Group, LLC (LMPPG). These materials are being provided for illustrative and informational purposes only. The information contained herein is obtained from multiple sources that are believed to be reliable. However, such information has not been verified, and may be different from the information included in documents and materials created by the sponsor firm in whose investment program a client participates. Some sponsor firms may require that these LMPPG materials are preceded or accompanied by investment profiles or other documents or materials prepared by such sponsor firms, which will be provided upon a client's request. For additional information, documents and/or materials, please speak to your Financial Advisor.

Terms and definitions:

Dividend yield is determined by dividing a stock's annual dividends per share by the current market price per share. Dividend yield is a financial ratio that shows how much a company pays out in dividends.

P/E (Year 1) is the previous day's closing price of the stock divided by the consensus earnings per share (EPS) of fiscal year 1 (FY1) provided by I/B/E/S. Forecasts are inherently limited and should not be relied upon as indicators of future performance.

The **price-to-book ratio (P/B)** is a stock's price divided by the stock's per share book value. Earnings per share (EPS) is the portion of a company's profit allocated to each outstanding share of a common stock.

Weighted median market capitalization represents the value at which half the portfolio's market capitalization weight falls above and half falls below.

Weighted average market capitalization represents the average value of the companies held in the portfolio. When that figure is weighted, the impact of each company's capitalization on the overall average is proportional to the total market value of its shares.

Market capitalization measures the number of outstanding common shares of a given corporation multiplied by the latest price per share.

Standard deviation measures the risk or volatility of an investment's return over a particular time period; the greater the number, the greater the risk.

The **up capture ratio** measures the manager's overall performance to the benchmark's overall performance, considering only quarters that are positive in the benchmark. An Up Capture Ratio of more than 1.0 indicates a manager who outperforms the relative benchmark in the benchmark's positive quarters.

The **down capture ratio** is the ratio of the manager's overall performance to the benchmark's overall performance, considering only quarters that are negative in the benchmark. A Down Capture Ratio of less than 1.0 indicates a manager who outperforms the relative benchmark in the benchmark's negative quarters and protects more of a portfolio's value during down markets.

Alpha is a measure of performance vs. a benchmark on a risk-adjusted basis. A positive alpha of 1.0 means the portfolio has outperformed its benchmark index by 1%. Correspondingly, a similar negative alpha would indicate an underperformance of 1%. Alpha is a measure of the difference between actual returns and expected performance measuring sensitivity to index movements.

Beta measures the sensitivity of an investment to the movement of its benchmark. A beta higher than 1.0 indicates the investment has been more volatile than the benchmark and a beta of less than 1.0 indicates that the investment has been less volatile than the benchmark.

Sharpe ratio is a risk-adjusted measure, calculated using standard deviation and excess return to determine reward per unit of risk. The higher the Sharpe ratio, the better a portfolio's historical risk-adjusted performance.

R-squared measures the strength of the linear relationship between a fund and its benchmark. R-squared at 1.00 implies perfect linear relationship and zero implies no relationship exists.

Any information, statement or opinion set forth herein is general in nature, is not directed to or based on the financial situation or needs of any particular investor, and does not constitute, and should not be construed as, investment advice, forecast of future events, a guarantee of future results, or a recommendation with respect to any particular security or investment strategy or type of retirement account. Investors seeking financial advice regarding the appropriateness of investing in any securities or investment strategies should consult their financial professional.
