

CLEARBRIDGE INTERNATIONAL VALUE FUND

Investment overview

Employs an active approach to invest in multi-cap, non-U.S. companies, in both developed and emerging market countries

Seeks geographical diversification by region and country

Uses both quantitative and bottom-up fundamental analysis to identify undervalued companies

Average annual total returns & fund expenses[^] (%) as of Sept. 30, 2018

Performance shown represents past performance and is no guarantee of future results. Current performance may be higher or lower than the performance shown. Investment return and principal value will fluctuate, so shares, when redeemed, may be worth more or less than the original cost. Class A shares have a maximum front-end sales charge of 5.75%. Class C shares have a one-year CDSC of 1.0%. If sales charges were included, performance shown would be lower. Total returns assume the reinvestment of all distributions at net asset value and the deduction of all Fund expenses. Total return figures are based on the NAV per share applied to shareholder subscriptions and redemptions, which may differ from the NAV per share disclosed in Fund shareholder reports. Performance would have been lower if fees had not been waived in various periods. YTD is calculated from January 1 of the reporting year. All classes of shares may not be available to all investors or through all distribution channels. For the most recent month-end information, please visit www.leggmasonfunds.com.

Portfolio management

Your Fund is managed by a team including Paul D. Ehrlichman (industry since 1984), Sean M. Bogda (industry since 1992), Safa R. Muhtaseb (industry since 1985) and Grace Su (industry since 2001).

ClearBridge Investments offers institutional and individual investors a variety of traditional and alternative equity strategies. With an investment heritage dating back over 50 years, ClearBridge offers distinctive manager insights and proprietary fundamental research.

Legg Mason's unique structure provides you with access to this specialized expertise. We offer a powerful portfolio of solutions through our independent investment management firms.

What should I know before investing?

Equity securities are subject to price fluctuation and possible loss of principal. Small- and mid-cap stocks involve greater risks and volatility than large-cap stocks. International investments are subject to special risks, including currency fluctuations and social, economic and political uncertainties, which could increase volatility. These risks are magnified in emerging markets. To the extent the fund invests in fixed income, these securities are subject to various risks, including but not limited to, credit, inflation, income, prepayment and interest rates risks. As interest rates rise, the value of fixed-income securities falls. Active management does not ensure gains or protect against market declines.

Where can I find more information?

You'll find the most current performance data, commentary, prospectus and more information on each of our managers and products at www.leggmasonfunds.com.

Beta measures the sensitivity of an investment to the movement of its benchmark. A beta higher than 1.0 indicates the investment has been more volatile than the benchmark and a beta of less than 1.0 indicates that the investment has been less volatile than the benchmark. **R-squared** measures the strength of the linear relationship between the Fund and its benchmark. R Squared at 1 implies perfect linear relationship and zero implies no relationship exists. **Sharpe ratio** is a risk-adjusted measure, calculated using standard deviation and excess return to determine reward per unit of risk. The higher the sharpe ratio, the better the fund's historical risk-adjusted performance. **Standard deviation** measures the risk or volatility of an investment's return over a particular time period; the greater the number, the greater the risk. **Alpha** measures performance vs. a benchmark on a risk-adjusted basis. A positive alpha of 1.0 means the portfolio has outperformed its benchmark index by 1%. Correspondingly, a similar negative alpha would indicate an underperformance of 1%. **Tracking Error** is the dispersal of differences between the returns obtained by the Fund and the benchmark variation. **Information Ratio** is the ratio of annualized expected residual return to residual risk. **Turnover** is a measure of the Fund's trading activity which represents the portion of the Fund's holdings that has changed over a year. There is no assurance that the Fund will maintain its current level of turnover.

The **MSCI All-Country World Index ex US** (MSCI ACWI Index ex US) is a market capitalization weighted index designed to measure the equity market performance of developed and emerging markets. Investors cannot invest directly in an index and unmanaged index returns do not reflect any fees, expenses or sales charges.

Active share is a measure of the percentage of stock holdings in a manager's portfolio that differs from the benchmark index.
