Performance shown represents past performance and is no guarantee of future results. Current performance may be higher or lower than the performance shown. Investment return and principal value will fluctuate, so shares, when redeemed, may be worth more or less than the original cost. Class A and A2 shares have a maximum front-end sales charge of 4.25%. Class C shares have a one-year CDSC of 1.0%. If sales charges were included, performance shown would be lower. Performance for other share classes will vary due to differences in sales charge structure and class expenses. Total returns assume the reinvestment of all distributions at net asset value and the deduction of all Fund expenses. Total return figures are based on the NAV per share applied to shareholder subscriptions and redemptions, which may differ from the NAV per share disclosed in Fund shareholder reports. Performance would have been lower if fees had not been waived in various periods. Absent reimbursements and/or fee waivers, the Fund's 30-day SEC yield for Class A, C, FI and I, respectively, would have been: 3.98%, 3.35%, 4.00% and 4.34%. YTD is calculated from January 1 of the reporting year. All classes of shares may not be available to all investors or through all distribution channels. To obtain the most recent month-end information, please visit www.leggmasonfunds.com.

Effective April 15, 2019, Class C shares became eligible for conversion to Class A shares, after the shares have been held for 10 years. Class C share performance shown has not been adjusted to reflect the conversion. Customers of certain Service Agents may be subject to different terms or conditions as set by their Service Agent, including non-conversion. Please refer to the Prospectus for more information, or contact your Service Agent directly.

^A Gross expenses are the Fund's total annual operating expenses for the share class(es) shown. Net expenses for Class(es) A, A2, C, C1, FI, I & IS reflect contractual fee waivers and/or reimbursements, where these reductions reduce the Fund's gross expenses, which cannot be terminated prior to Dec 31, 2020 without Board consent.

Portfolio management

Western Asset Management is one of the world's leading fixed-income managers. With a focus on long-term fundamental value investing that employs a top-down and bottom-up approach, the firm has nine offices around the globe and deep experience across the range of fixed-income sectors. Founded in 1971, Western Asset has been recognized for an approach emphasizing team management and intensive proprietary research, supported by robust risk management.

Legg Mason's unique structure provides you with access to this specialized expertise. We offer a powerful portfolio of solutions through our independent investment management firms.

What should I know before investing?

Fixed-income securities involve interest rate, credit, inflation, and reinvestment risks; and possible loss of principal. As interest rates rise, the value of fixed-income securities falls. High yield bonds are subject to greater price volatility, illiquidity, and possibility of default. Derivatives, such as options and futures, can be illiquid, may disproportionately increase losses, and have a potentially large impact on Fund performance. Leverage may increase volatility and possibility of loss. International investments are subject to special risks, including currency fluctuations and social, economic and political uncertainties, which could increase volatility. These risks are magnified in emerging markets. As a non-diversified Fund, it is permitted to invest a higher percentage of its assets in any one issuer than a diversified fund, which may magnify the Fund's losses from events affecting a particular issuer.

Where can I find more information?

You'll find the most current performance data, commentary, prospectus and more information on each of our managers and products at www.leggmasonfunds.com.

Credit quality is a measure of a bond issuer's ability to repay interest and principal in a timely manner. The credit ratings shown are based on each portfolio security's rating as provided by Standard and Poor's, Moody's Investors Service and/or Fitch Ratings, Ltd. and typically range from AAA (highest) to D (lowest), or an equivalent and/or similar rating. For this purpose, if two or more of the agencies have assigned differing ratings to a security, the lowest rating is used. Securities that are unrated by all three agencies are reflected as such. The credit quality of the investments in the Fund's portfolio does not apply to the stability or safety of the Fund. These ratings are updated monthly and may change over time. **Please note, the Fund itself has not been rated by an independent rating agency.**

Beta measures the sensitivity of an investment to the movement of its benchmark. A beta higher than 1.0 indicates the investment has been more volatile than the benchmark and a beta of less than 1.0 indicates that the investment has been less volatile than the benchmark. **R-squared** measures the strength of the linear relationship between the Fund and its benchmark. R Squared at 1 implies perfect linear relationship and zero implies no relationship exists. **Sharpe ratio** refers to a risk-adjusted measure calculated using standard deviation and excess returns to determine reward per unit of risk. The higher the ratio, the greater the risk-adjusted performance. **Standard deviation** indicates the percentage by which a fund's performance has varied from its average performance in any given month during the period indicated. The higher the standard deviation, the greater the range of performance, indicating greater volatility. **Turnover** is a measure of the Fund's trading activity which represents the portion of the Fund's holdings that has changed over a year. There is no assurance that the Fund will maintain its current level of turnover.

Effective Duration is a duration calculation for bonds with embedded options. Effective duration takes into account that expected cash flows will fluctuate as interest rates change. **Duration** measures the sensitivity of price (the value of principal) of a fixed-income investment to a change in interest rates. The higher the duration number, the more sensitive a fixed-income investment will be to interest rate changes.

The **30-day SEC yield**, calculated pursuant to the standard SEC formula, is based on a Fund's investments over an annualized trailing 30-day period and not on the distributions paid by the Fund, which may differ.

The **JPMorgan Emerging Markets Bond Index** ("EMBI Global") tracks total returns for U.S. dollar-denominated debt instruments issued by emerging market sovereign and quasi-sovereign entities: Brady bonds, loans, Eurobonds and local market instruments. Investors cannot invest directly in an index and unmanaged index returns do not reflect any fees, expenses or sales charges.

A general rise in interest rates may lead to increased portfolio volatility.
