

Legg Mason Western Asset Global High Yield Fund Class A Distr. (D) (USD)

Fund details

Investment aim:

The Fund's primary aim is to generate total return by investing at least 70% of its Net Asset Value in high-yielding debt securities (higher yields are generally available from securities rated below investment grade). The Fund is a global fund and is not confined to investing in any specific country or region, although it is expected that it will invest in at least 10 different countries and will not be investing more than 45% in high-yielding emerging market countries.

The value of investments and the income from them may go down as well as up and you may not get back the amount you originally invested.

Fund inception date: 20.04.2007

Performance inception date: 20.09.1999

Benchmark (USD)	-2.72	8.42	15.60	-0.69	2.58

Rolling 12 months performance (%)

Past performance is not a reliable indicator of future results. Source for performance figures - Legg Mason.

Performance is calculated on a NAV to NAV, with gross income reinvested without initial charges but reflecting annual management fees. Sales charges, taxes and other locally applied costs have not been deducted.

From 25 March 2019, the pricing of securities held in the Fund will use the mean (or mid) value of the bid and ask prices, to calculate the Fund's Net Asset Values ("NAV"). The Fund previously used a bid price methodology for fixed income securities, and last traded price for equity securities.

Performance shown includes periods prior to the Fund's inception date, reflecting performance of a predecessor fund (the Salomon Brothers Global Horizons Global High Yield Bond Fund) with a substantially similar investment objective and policy and whose assets were transferred into this Fund on 20 April 2007. Please refer below for more information.¹

Percentages are based on total portfolio as of date displayed and are subject to change at any time. Holdings and allocations breakdowns are provided for information purposes only and should not be deemed a recommendation to buy or sell the securities mentioned or securities in the industries shown. Source: Legg Mason

¹ The performance shown is for Class A Distribution Shares. The performance data should be used for illustrative purposes only as performance prior to the inception date has not been adjusted to reflect the higher fees of the Fund. As at 20 April 2007, the Fund's fixed annual expenses for Class A Shares (investment management fees, custody and administration fees and shareholder servicing fees) were around 1.55% in comparison to the predecessor fund of 1.37% - there may be other variable costs not included in these figures. This means that the performance of the predecessor fund would have been lower had its expenses equalled those of the Fund. Please note that the Fund's TER is subject to change.

Investment risks

The fund does not offer any capital guarantee or protection and you may not get back the amount invested.

The fund is subject to the following risks which are materially relevant but may not be adequately captured by the indicator:

Bonds: There is a risk that issuers of bonds held by the fund may not be able to repay the investment or pay the interest due on it, leading to losses for the fund. Bond values are affected by the market's view of the above risk, and by changes in interest rates and inflation.

Liquidity: In certain circumstances it may be difficult to sell the fund's investments because there may not be enough demand for them in the markets, in which case the fund may not be able to minimise a loss on such investments.

Low rated bonds: The fund may invest in lower rated or unrated bonds of similar quality, which carry a higher degree of risk than higher rated bonds.

Emerging markets investment: The fund may invest in the markets of countries which are smaller, less developed and regulated, and more volatile than the markets of more developed countries.

Derivatives: The use of derivatives can result in greater fluctuations of the fund's value and may cause the fund to lose as much as or more than the amount invested.

Hedging: The fund may use derivatives to reduce the risk of movements in exchange rates between the currency of the investments held by the fund and base currency of the fund itself (hedging). However, hedging transactions can also expose the fund to additional risks, such as the risk that the counterparty to the transaction may not be able to make its payments, which may result in loss to the fund.

Interest rates: Changes in interest rates may negatively affect the value of the fund. Typically as interest rates rise, bond values fall.

Fund counterparties: The fund may suffer losses if the parties that it trades with cannot meet their financial obligations.

Fund operations: The fund is subject to the risk of loss resulting from inadequate or failed internal processes, people or systems or those of third parties such as those responsible for the custody of its assets, especially to the extent that it invests in developing countries.

For further explanation on the risks associated with an investment in the fund, please refer to the section entitled "Risk Factors" in the base prospectus and "Primary Risks" in the fund supplement.

A temporary negative cash position may be due to (1) unsettled trade activity (2) permitted purposes, such as borrowing or derivatives use, if allowed by the prospectus.

Definitions

Risk and reward profile: There is no guarantee that the fund will remain in the indicator category shown above and the categorisation of the fund may shift over time. Historical data, which is used in calculating the indicator, may not be a reliable indicator of the future risk profile of this fund. The lowest category does not mean a risk-free investment. The fund does not offer any capital guarantee or protection.

Life: The average number of years for which each component of unpaid principal on a bond, loan or mortgage remains outstanding. The weighted average life calculation provides an aggregate figure that shows how many years it will take to pay off half the outstanding principal on a bond portfolio.

Effective duration: Average Duration equals the weighted average maturity of all the cash flows in the portfolio and gives an indication of the sensitivity of a portfolio's bond prices to a change in interest rates. The higher the duration, the more sensitive the portfolio is to interest rate changes. Effective Duration is a calculation for bonds with embedded options (Not every portfolio will purchase bonds with embedded options). It takes into account the expected change in cash flows caused by the option, as interest rates change. If a portfolio does not hold bonds with embedded options, then the Effective Duration will be equal to the Average Duration.

Credit quality breakdown: Nationally Recognised Statistical Rating Organisations (NRSROs) assess the likelihood of bond issuers defaulting on a bond's coupon and principal payments. The weighted average credit quality by Western Asset Management assigns each security the higher rating from three NRSROs (Standard & Poor's, Moody's Investor Services and Fitch Ratings, Ltd.). If only one NRSRO assigns a rating, that rating will be used. Securities that are not rated by all three NRSROs are reflected as such. The lower the overall credit rating, the riskier the portfolio. The credit rating is expressed as a regular letter rating (from high to low quality): AAA, AA, A, BBB, BB, ...D.

Important information

OUTSIDE OF THE UNITED KINGDOM, IRELAND AND SWITZERLAND, THIS FACTSHEET IS FOR USE BY PROFESSIONAL OR QUALIFIED INVESTORS ONLY.

This is a sub-fund of Legg Mason Global Funds plc ("LMGF plc"), LMGF is an open-ended investment company with variable capital, organised as an undertaking for collective investment in transferable securities ("UCITS"). LMGF is authorised in Ireland by the Central Bank of Ireland.
